

opHop:

Addressing opioid crisis

FirstNet Hackathon: The Road to 5G (AT&T)

Sarah Nikkhah, Radhika Ravindran, Sahitesh Reddypelly, Ananth Reddy, Mohan Mahesh

What are opioids?

Pain killers

Affect brain areas controlling emotion

Manufactured in lab

Require doctor prescription

Apparently, you can get it from your friends, family and loved ones[1].

Don't! Seriously Don't!!!!!!

What if my doctor prescribes opioids for me?

"Always talk to your doctor about managing your pain better without opioids." [2]

Some Popular Opioids:

Codeine (only available in generic form)

Fentanyl (Actiq, Duragesic, Fentora, Abstral, Onsolis)

Hydrocodone (Hysingla, Zohydro ER)

Hydrocodone/acetaminophen (Lorcet, Lortab, Norco, Vicodin)

Hydromorphone (Dilaudid, Exalgo)

Meperidine (Demerol)

Methadone (Dolophine, Methadose)

Methadone (Dolophine, Methadose)

Heroin (Diamorphine) [3]

First Steps

We Did Literature Review

We Did Data Extraction

We Did Some Short Semi-Structured Interviews with different stakeholders here

THE STATE OF OPIOID MISUSE IN AMERICA (2017)

11.4 million people misused opioids in the past year

- 11.1 million misused pain relievers
- 886,000 used heroin
- 562,000 both misused pain relievers and heroin

2.1 million people had an opioid use disorder

- 1.7 million people with a prescription pain reliever use disorder
- 652,000 people with a heroin use disorder
- 252,000 had both pain reliever and heroin use disorders

53.1%

obtained the last
pain reliever they
misused from a
friend or relative

36%

from a prescription
from a healthcare
provider

Main reasons for opioid misuse: Pain 62.6%

OFFICE OF THE
ASSISTANT SECRETARY FOR HEALTH

NSDUH, 2017 Data; published Sept. 2018

U.S. DRUG OVERDOSE DEATHS

THE MOST CRITICAL PUBLIC HEALTH CHALLENGE OF OUR TIME

OFFICE OF THE
ASSISTANT SECRETARY FOR HEALTH

SOURCE: NCHS, National Vital Statics System, Mortality

HHS 5-POINT STRATEGY TO COMBAT THE OPIOIDS CRISIS

Better addiction prevention, treatment, and recovery services

Better data

Better pain management

Better targeting of overdose reversing drugs

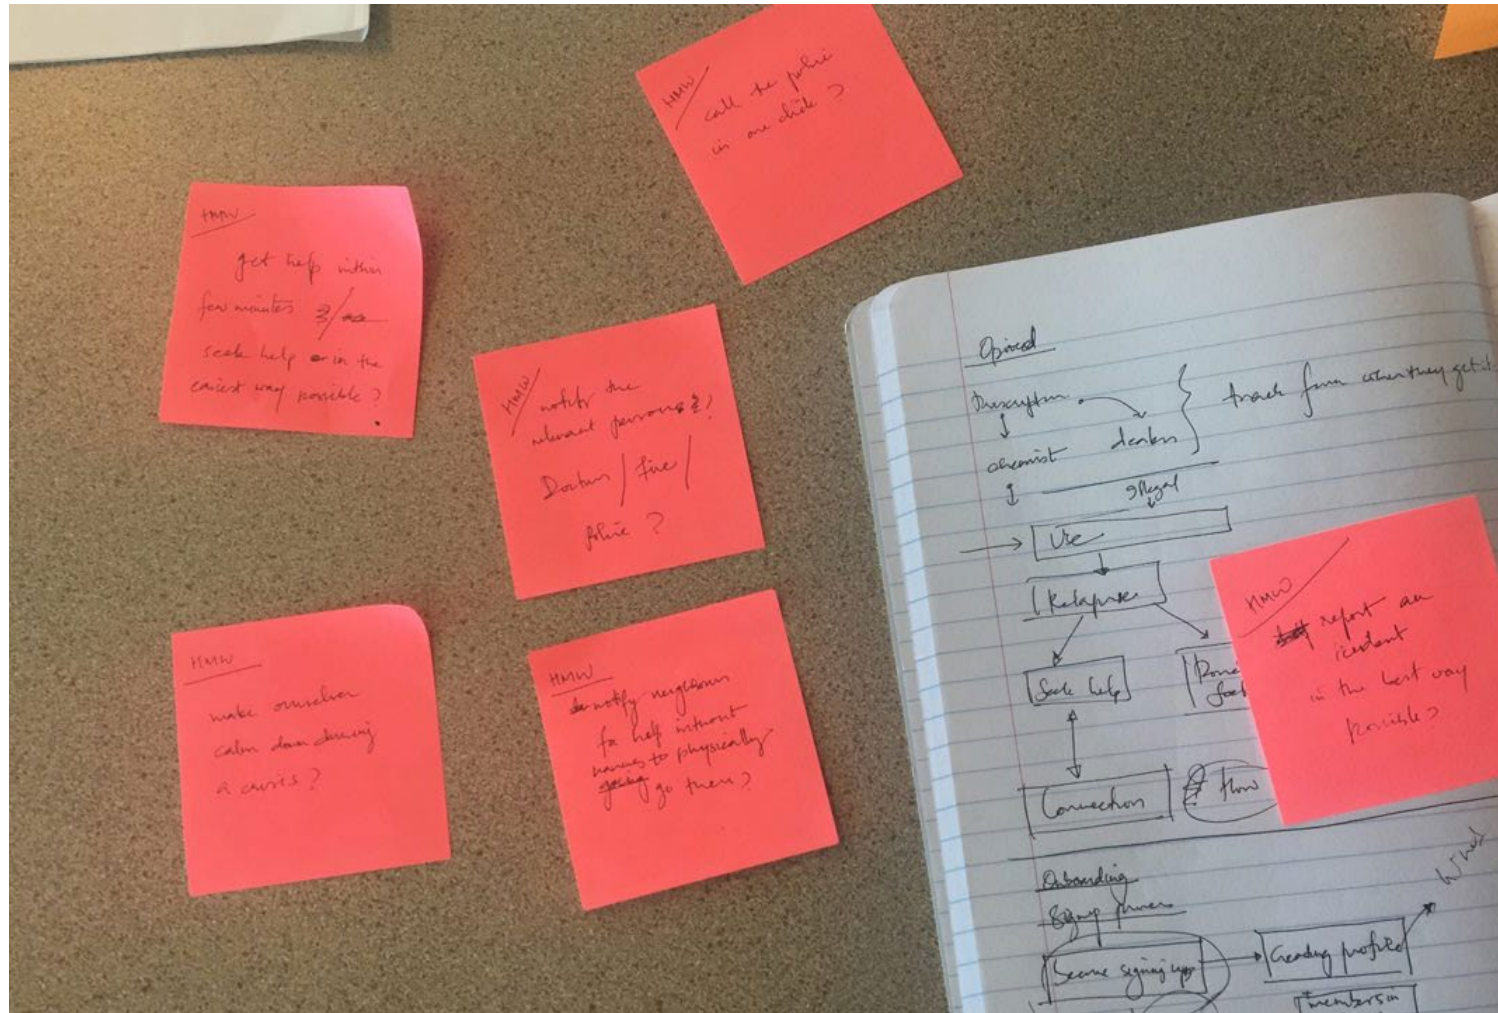

Better research

Affinity Diagrams Flow Diagrams

Sponsors & Sponsees

Who are they?

Main findings

- They need to be healthy again
- They need to get read of pain
- They want app they can trust
- They want a push button in case of emergency
- They will allow the app to share their location with police and healthcare in case of emergency
- The time of crisis they are usually down and alone
- Increasing knowledge around opioids
- Sending messages to sponsors
- Reminders
- Scheduling feature
- Sharing location with a network of support

Our Persona Mia Story Boards

Mia

TBM Developer
Packaging: The Drive to 30 (AT&T)
CRAIG SMITH

Handwritten notes on a piece of paper, including the words "model" and "to design".

CODE FOR GOOD!
It's a great challenge to build digital code without
...
Engaging the Community

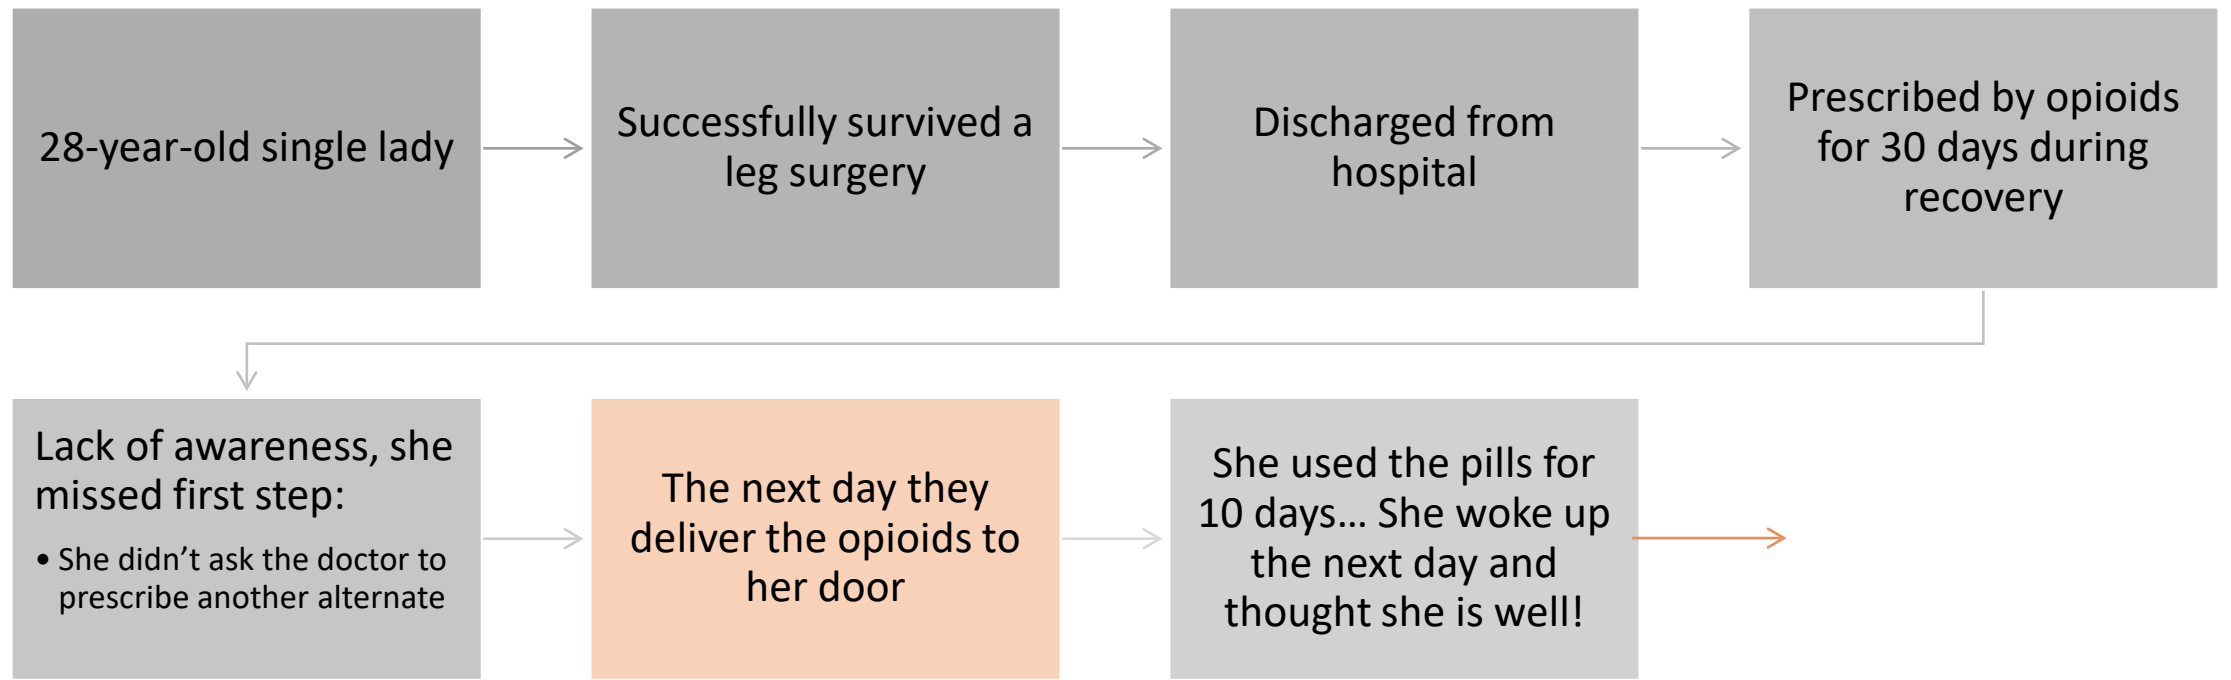

Handwritten notes on a pink sticky note, including the words "call to police" and "on the side".

Emergency Alert

Demo

Addressing Opioid Crisis

- Connecting Sponsors & Sponsees
- Controlled downloads
- Emergency alerts through shakes & option-press
- Questionnaires to collect and monitor health data
- Text message between sponsees and sponsors & sponsees and family
- Location awareness of hospitals and rehabilitation centers within 3-mile radius
- Analytics to show the improvement
- To-do list for unfinished tasks
- Sponsees encouraged to be future sponsors

Addressing Community Engagement Crisis

- Connecting Sponsors & Sponsees
- Building mutual understanding between sponsees and the community
- Ending isolated drug overdose cases
- Engaging more people from the community to become sponsors (sponsees ultimately turning sponsors)
- This can be used community-wide that build strong bonds thus ending mutual distrusts and communication divide
- Most of the violent crimes happen due to isolation, we hope this app could address this aspect as well

Addressing safety and informing first- responders

- Emergency text alert via a single click
- Emergency alert via 3 vigorous shakes of the device while the sponsee is in trouble/ having an epileptic shock
- The data received from the behavioral questionnaire can be used to build a database for future use for the first-responders
- Pattern recognition for quicker response

Future steps

- Connection to social media for and image analysis. This could enable the sponsor to understand the whereabouts of the sponsees to understand their community engagement.

Technologies Used

- Android
- IBM Watson Studio
- Google API
- MPH Open Data
- Python
- Jupyter notebook
- Adobe Creative Suite
- Microsoft office Suite
